

NIAZ RAHMAN

Backend & Full Stack Development · Node.js & TypeScript · Data Driven Product Work

Bashundhara, Dhaka | +880 1602 068167 | rahmanniaz29@gmail.com

github.com/niazbuoy08 | linkedin.com/in/niazman

PROFESSIONAL SUMMARY

Software Engineering graduate who combines strong technical skills with hands on product and business experience. Has built and shipped applications end to end across logistics, machine learning and job matching using TypeScript, Node.js, MongoDB and SQL. Currently working at Sheba Technologies on live FinTech and banking products, translating business requirements into practical technical solutions and working closely with clients and engineering teams to deliver them.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Backend & APIs	Node.js, Express, Next.js API routes, FastAPI, REST and JSON API design, authentication and sessions, role based access control, Zod request validation, state machines, concurrency control
Databases	MongoDB and MongoDB Atlas (schema design, aggregation pipelines, query design), SQL, relational and document data modelling, data extraction and transformation
Tooling	React, Git, GitHub Actions, unit testing in CI, API testing, LLM assisted development
Practice	Agile and Scrum, Jira, technical documentation (BRD, HLD, LLD), root cause analysis, stakeholder management
Data & ML	pandas, NumPy, scikit learn, XGBoost, LightGBM, CatBoost, SHAP, predictive modelling, feature engineering, cohort and segmentation analysis, Power BI, advanced Excel, KPI dashboards
Domains	Logistics and courier operations, FinTech and banking, telecom, e commerce

ENGINEERING PROJECTS

Courier Ops, Parcel Delivery Operations Platform

2026

Next.js · TypeScript · MongoDB

[GitHub repository](#)

- Built an internal operations platform where dispatchers register shipments, push tracking scans and flag exceptions, while ops leads watch live tiles for volume, status mix and overdue parcels.
- Modelled the shipment lifecycle as a forward only **state machine**, enforced on the server with compare and swap updates so two dispatchers scanning the same parcel can never skip or reorder a step.
- Wrote the MongoDB **aggregation pipeline** behind the dashboard, a filterable query endpoint with CSV export, and an append only activity log recording who changed what and when.
- Added a tested 72 hour **delivery SLA rule** that classifies new and historical shipments as on track, due soon, overdue or late.
- Validated every request body and query string with Zod, applied role based access control per route, and covered the domain logic with **85 unit tests** running in CI.

AI Powered Customer Churn Prediction & Retention System

2025 to 2026

Python · FastAPI · MongoDB Atlas · React · Machine Learning

[GitHub repository](#)

- Built a full stack decision system that shows, for every subscriber, who is about to leave, why, and what will retain them: roughly 11,000 lines across a **70 endpoint JSON API** in FastAPI, a MongoDB Atlas data layer and a React front end.
- Designed the API around the full model lifecycle: dataset ingestion, training runs, versioned model artefacts, batch and single record scoring, and an admin console for retraining.
- Cleaned 7,043 subscriber records, engineered behavioural and billing features, and benchmarked 7 classifiers including XGBoost, LightGBM, CatBoost and Random Forest, reaching **0.845 ROC AUC** and 79.6% accuracy.
- Explained predictions with SHAP and used the Google Gemini API to turn each one into a concrete retention action, shown on an 8 KPI dashboard.

SmartHire, Semantic Job Matching Platform

Node.js · Express · MongoDB · REST API

2024 to 2025

[GitHub repository](#)

- Built the backend with a small team: data models, REST JSON APIs for authentication, candidate profiles, job posts and applications, and the query layer behind them.
- Shipped the semantic candidate to job matching engine that lifted match relevance by **30%** over keyword matching, integrated with the front end through documented API contracts and Git based code review.

PROFESSIONAL EXPERIENCE

Sheba Technologies Limited

Business Analyst

Oct 2025 to Present

Dhaka, Bangladesh

- Bridge international client stakeholders and engineering teams on live FinTech and banking platforms, turning business goals into requirements, acceptance criteria and KPIs, then tracking delivery in Agile sprints.
- Analyse post launch issue data for the live **bKash Channel KYC** platform, grouping cases by root cause and business impact into a prioritised engineering action list that cut resolution cycles.
- Author and maintain **15+ technical artefacts**, including BRD, HLD, LLD, process models, report logic, test cases and user manuals, using LLM tooling to speed up turnaround.
- Led accessibility compliance for **HSBC MyCalendar** with AbilityNet: audited 58 WCAG issues into a tracked remediation plan, worked through the fixes with engineers and secured full third party certification.

EDUCATION

Islamic University of Technology (IUT)

B.Sc. in Software Engineering · CGPA 3.39 out of 4.00

Graduated Aug 2026

Dhaka, Bangladesh

Coursework: data structures and algorithms, database management systems, object oriented programming, software design and architecture, operating systems, computer networks, software quality and testing

Mastermind English Medium School

Cambridge A Level: 4 A*

2021

Dhaka, Bangladesh

Mastermind English Medium School

Cambridge O Level: 6 A* and 2 A

2019

Dhaka, Bangladesh

LEADERSHIP & EXTRACURRICULAR

IUT Career & Business Society

Vice President, Development and Planning

Feb 2024 to Present

Dhaka, Bangladesh

- Organised IUT Career Expo 2024 and 2025, securing **20+ leading companies** including BAT, Nestlé, bKash and Summit Communications.
- Led INTERN 2024, an intra university case competition, and drove BizNation 2.0, including industry partnerships and coordination of 20+ professional judges.

British American Tobacco Bangladesh (BATB)

XCEED Talent Campus Ambassador

July 2025 to Present

Dhaka, Bangladesh

- Ran a full campus survey, analysed the responses and turned the findings into a Campus Activation Strategy for BAT tailored to IUT.
- Helped BATB identify top talent across IUT by scouting high performing students from different departments and channelling them into the company's early careers pipeline.

HONOURS & AWARDS

- **1st Runner up**, Over the Wall Season 4, Marico Bangladesh 1,600+ teams
- **Top 45**, Bizmaestros X UFLP, Unilever Bangladesh 12,000+ candidates
- **1st Runner up**, Breaking Brand 2026 415+ teams
- **1st Runner up**, 3ZERO Ideation Challenge 100+ teams
- **2nd Runner up**, BIZVERSE 2025, BRAC BIZZBEE 300+ teams
- **2nd Runner up (Bronze)**, National Blockchain Olympiad 2024 200+ teams
